'Ua'u
Hawaiian Petrel

'Ua'u Quick Facts

Scientific name: *Pterodroma sandwichensis*

Conservation status: Endangered

- ✈ Endemic to Hawai'i
- ✈ Breeding pairs only lay 1 egg per year
- ✈ Birds mate for life (but will sometimes divorce if chicks are unsuccessful)
- ✈ Both parents help raise young
- ✈ Nests are burrows in rock crevices or wet, dense forests
- ✈ Return to the same burrow year after year

Colony Locations:

- ✈ Maui (Haleakalā Summit) – Largest
- ✈ Lāna'i (Lāna'ihale)
- ✈ Kaua'i (Interior steep slopes in forests)
- ✈ Hawai'i Island (Mauna Kea, Mauna Loa & Kohala Mountains)

What We Do

- ✈ Survey isles and remote locations for unknown populations
- ✈ Protect existing habitat and colonies
- ✈ Monitor colonies to estimate the bird's phenology (timeline) and the effect of predation
- ✈ Document adult and fledging burrow activities
- ✈ Recover, evaluate condition, and release downed birds

How You Can Help

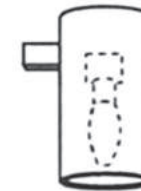

- ✈ Keep your dogs on leashes
- ✈ Keep your cats indoors
- ✈ If you find a seabird on the ground, pick up bird using a cloth and place in a ventilated box or carrier. Call Maui Nui Seabird Recovery Project immediately at (808) 573-BIRD
- ✈ Use shielded lighting outside of your home or business
